New York Magazine 1997-02-24 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

The Protestant Establishment Edward Digby Baltzell 1987-01-01 This classic account of the traditional upper class in America traces its origins, lifestyles, and political and social attitudes from the time of Theodore Roosevelt to that of John F. Kennedy. Sociologist E. Digby Baltzell describes the problems of exclusion and prejudice within the community of white Anglo-Saxon Protestants (or WASPs, an acronym he coined) and predicts with amazing accuracy what will happen when this inbred group is forced to share privilege and power with talented members of minority groups. "The book may actually hold more interest today than when it was first published. New generations of readers can resonate all the more to this masterly and beautifully written work that provides sociological understanding of its engrossing subject."--Robert K. Merton, Columbia University "The documentation and illustration in the book make it valuable as social history, quite apart from any theoretical hypothesis. As such, it sketches the rise of the WASP penchant for country clubs, patriotic societies and genealogy. It traces the history of anti-Semitism in America. It describes the intellectual conflict between Social Darwinism and the environmental social

science founded half a century ago by men like John Dewey, Charles A. Beard, Thorstein Veblen, Franz Boas and Frederick Jackson Turner. In short, The Protestant Establishment is a wide-ranging, intelligent and provocative book."--Alvin Toffler, New York Times Book Review "The Protestant Establishment has many virtues that lift it above the level we have come to expect in works of contemporary social and cultural analysis. It is clearly and convincingly written."--H. Stuart Hughes, New York Review of Books "What makes Baltzell's analysis of the evolution of the American elite superior to the accounts of earlier writers . . . is that he exposes the connections between high social status and political and economic power."--Dennis H. Wrong, Commentary

I Have, Who Has? Language Arts, Gr. 5-6, eBook Trisha Callella 2006-03-07 The activities in this book consist of a series of question and answer cards. Ordered Chaos Mary Ellen Ryder 1994-01-01 This work presents a model for novel compound interpretation using Cognitive Grammar and schema theory. The model, based on analysis of established compounds and responses to novel compounds, claims that speakers try using real-world schemas attached to both element nouns to construct a relationship between them by matching already established patterns. When this is impossible, speakers often "metaphorize" the head noun.

Irrigation Engineering Dr. Gurcharan Singh 1980-11-11 The subject "Irrigation Engineering" has assumed importance since last 30 to 40 years. Continued

increase in population, particular in developing countries, at a very fast rate has caused scarcity of food. The real answer to food problem, is increased production of food articles; which is possible only by artificial irrigation of fields. India has a very large potential for irrigation, because area and water resources both are abundantly available. Abundance of area for irrigation arid availability of lot of water resources are probably the reasons that most of the early irrigation practices and theories were developed in India. There is lot of variations in rainfall in different regions of India. Some of the areas have very little rainfall insufficient to grow any crop. Other areas have sufficient rainfall but its distribution is not as required by the crops. Scanty rainfall and erratic distribution both necessitate artificial irrigation. The purpose of this book is to present the subject in most concise form. Simplicity of language is the main feature of the book. The book is completely in MKS units and covers the syllabus of all the Indian Universities, State Technical Boards, and A.M.I.E. (India) examinations. The book should be equally useful to practicing Engineers as reference book. Examples of almost all the important irrigation works have been solved and then illustrated in neat drawing charts. Khosla’s Charts, Lacey’s and Garret diagrams all are in MKS units. Rajsons Publications Pvt. Ltd. Every effort was made to eliminate printing errors. I would appreciate if printing errors are brought to my notice and Suggestions to bring about improvements in the book are most welcome. I am thankful to all my friends who have rendered great help by their valuable suggestions. In last I am thankful to Shri R.K. Jain, Prop. Standard Book House, without whose efforts this venture would not have reached the readers.

Tuxedo Park Christian R. Sonne 2007 Wall Street titans, robber barons and scions of blue-blooded colonial families made Tuxedo Park synonymous with upper-class living in the first three decades of the 20th century. This gated Hudson Valley community only forty miles north of Manhattan is listed on the National Register of Historic Places in recognition of its distinctive Gilded Age mansions designed by well-known architects. Normally not accessible to the public, now, through 230 commissioned color photographs and fifty vintage postcards presented in a beautifully designed ¿coffee table¿ cloth edition, the natural beauty of Tuxedo Park, bejeweled by historic houses sited to take brilliant advantage of the mountainous terrain and splendid views of three lakes, and its rich social and architectural history, is available for the first time for all to share.

The Death of Demand Tom Osenton 2004 In this title, Osenton offers readers a comprehensive programme for increasing profits when they can't increase revenue.

Tuxedo's Tales Tuxedo Hess 2015-08-28 “My name is Tuxedo and this is my debut children’s book. I am a Criollo horse, originally from Argentina, but I was rescued by my Mum and bought back to the UK from Malaysia.” Tuxedo’s Tales will take children on a magical adventure spanning a year in the Sussex countryside. They will learn new words and their meanings, and appreciate how important family and friendships are. At the end of each chapter is a Pearl of Wisdom which will teach good behaviour, respect and consideration, as well as a few of life’s ethics and morals. “The other thing is, I’m a real horse - I do exist.” Tuxedo is alive and kicking enjoying his retirement being cuddled, groomed, going for leisurely rides and enjoying lots of carrots. “So, enjoy my tales of adventure and meeting my countryside friends, I hope you enjoy reading it as much as I did writing it.” The book includes lots of beautiful colourful illustrations by Katie Tunn. Think of characters with kind eyes, soft coloured drawings; think of a modern-day Beatrix Potter and you have Tuxedo’s Tales – a unique children’s book for those aged 5-9 years old. As Tuxedo was rescued, a percentage of the profits of Tuxedo’s Tales will be going towards Horse Welfare so they can help other horses to have a happier life.

The People's Place Dave Hoekstra 2015-10-01 Celebrated former Chicago Sun-Times columnist Dave Hoekstra unearths stories as he travels, tastes, and talks his way through 20 of America's soul food restaurants Dr. Martin Luther King Jr. loved the fried catfish and lemon icebox pie at Memphis's Four Way restaurant. In New Orleans, beloved chef Leah Chase recalls introducing George W. Bush to baked cheese grits and scolding Barack Obama for putting Tabasco sauce on her gumbo. Following the "soul food corridor" from the South through northern industrial cities, The People's Place gives voice to the remarkable chefs, workers, and small business owners who provided sustenance and a safe haven for civil rights pioneers, not to mention presidents and politicians; music, film, and sports legends; and countless everyday, working-class people. Featuring photographs, recipes, and ruminations from notable regulars—including Minnijean Brown, one of the Little Rock Nine who integrated Little Rock Central High School in 1957; former congressman and Atlanta Mayor Andrew Young; jazz legend Ramsey Lewis; James Meredith, the first African American student admitted to the segregated University of Mississippi; and many others—The People's Place is an unprecedented celebration of soul food and community.

Tuxedo Park Jennet Conant 2013-10-15 The untold story of an eccentric Wall Street tycoon and the circle of scientific geniuses he assembled before World War II to develop the science for radar and the atomic bomb. Together they changed the course of history. Legendary financier, philanthropist, and society figure Alfred Lee Loomis gathered the most visionary scientific minds of the twentieth century—Albert Einstein, Werner Heisenberg, Niels Bohr, Enrico Fermi, and others—at his state-of-the-art laboratory in Tuxedo Park, New York, in the late 1930s. He established a top-secret defense laboratory at MIT and personally bankrolled pioneering research into new, high-powered radar detection systems that helped defeat the German Air Force and U-boats. With Ernest Lawrence, the Nobel Prize-winning physicist, he pushed Franklin Delano Roosevelt to fund research in nuclear fission, which led to the development of the atomic bomb. Jennet Conant, the granddaughter of James Bryant Conant, one of the leading scientific advisers of World War II, enjoyed unprecedented access to Loomis’ papers, as well as to people intimately involved in his life and work. She pierces through Loomis’ obsessive secrecy and illuminates his role in assuring the Allied victory.

Indigenous Intellectuals Kiara M. Vigil 2015-07-15 In the United States of America today, debates among, between, and within Indian nations continue to focus on how to determine and define the boundaries of Indian ethnic identity and tribal citizenship. From the 1880s and into the 1930s, many Native people participated in similar debates as they confronted white cultural expectations regarding what it meant to be an Indian in modern American society. Using close readings of texts, images, and public performances, this book examines the literary output of four influential American Indian intellectuals who challenged long-held conceptions of Indian identity at the turn of the twentieth century. Kiara M. Vigil traces how the narrative discourses created by these figures spurred wider discussions about citizenship, race, and modernity in the United States. Vigil demonstrates how these figures deployed aspects of Native American cultural practice to authenticate their status both as indigenous peoples and as citizens of the United States.

What Happens Next Marc Norman 2008-10-07 Screenwriters have always been viewed as Hollywood’s stepchildren. Silent-film comedy pioneer Mack Sennett forbade his screenwriters from writing anything down, for fear they’d get inflated ideas about themselves as creative artists. The great midcentury director John Ford was known to answer studio executives’ complaints that he was behind schedule by tearing a handful of random pages from his script and tossing them over his shoulder. And Ken Russell was so contemptuous of Paddy Chayefsky’s screenplay for Altered States that Chayefsky insisted on having his name removed from the credits. Of course, popular impressions aside, screenwriters have been central to moviemaking since the first motion picture audiences got past the sheer novelty of seeing pictures that moved at all. Soon they wanted to know: What happens next? In this truly fresh perspective on the movies, veteran Oscar-winning screenwriter Marc Norman gives us the first comprehensive history of the men and women who have answered that question, from Anita Loos, the highest-paid screenwriter of her day, to Robert Towne, Quentin Tarantino, Charlie Kaufman, and other paradigm-busting talents reimagining movies for the new century. The whole rich story is here: Herman Mankiewicz and the telegram he sent from Hollywood to his friend Ben Hecht in New York: “Millions are to be grabbed out here and your only competition is idiots.” The unlikely sojourns of F. Scott Fitzgerald and William Faulkner as Hollywood screenwriters. The imposition of the Production Code in the early 1930s and the ingenious attempts of screenwriters to outwit the censors. How the script for Casablanca, “a disaster from start to finish,” based on what James Agee judged to be “one of the world’s worst plays,” took shape in a chaotic frenzy of writing and rewriting—and how one of the most famous denouements in motion picture history wasn’t scripted until a week after the last scheduled day of shooting—because they had to end the movie somehow. Norman explores the dark days of the Hollywood blacklist that devastated and divided Hollywood’s screenwriting community. He charts the rise of the writer-director in the early 1970s with names like Coppola, Lucas, and Allen and the disaster of Michael Cimino’s Heaven’s Gate that led the studios to retake control. He offers priceless portraits of the young William Hurt, Steven Spielberg, and Steven Soderbergh. And he describes the scare of 2005 when new technologies seemed to dry up the audience for movies, and the industry—along with its screenwriters—faced the necessity of reinventing itself as it had done before in the face of sound recording, color, widescreen, television, and other technological revolutions. Impeccably researched, erudite, and filled with unforgettable stories of the too often overlooked, maligned, and abused men and women who devised the ideas that others brought to life in action and words on-screen, this is a unique and engrossing history of the quintessential art form of our time.

Evolution of Radiation Oncology at Massachusetts General Hospital Herman D. Suit 2011-02-04 The Massachusetts General Hospital (MGH) has a history of excellence and is internationally recognized as a world class medical center, providing quality medical care, advancing medicine through clinical and laboratory research and facilitating the education of exceptional health care professionals. The Massachusetts General Hospital Radiation Oncology Department, staff, residents and fellows, past and present, concur that MGH stands for Man’s Greatest Hospital. This decidedly immodest assessment is widely viewed amongst this group as being manifestly true, and that perception is clearly reflected in a marvelous esprit de corp. Such an unequivocally positive attitude is solidly based on the judgment that the best possible care is provided to each MGH patient, i.e. the patient is, in fact, Number One. There is a deep sense of pride in the contributions made by this department to the scientific advancement of oncology, and to progressively and substantially increasing the proportion of patients who are free of tumor and of treatment related morbidity. Evolution of Radiation of Oncology at Massachusetts General Hospital is the work of the former Chair of the Department, Herman D. Suit. From 1970 – 2000, his guidance and management of this Department brought it to

recognition as a world class center. Dr. Suit was key in the development and building of the Department that now includes The Northeast Proton Therapy Center at the MGH. His passion for the science of radiation therapy and its evolving growth through the years is evident in this book. He has assembled a fascinating chronicle, beginning with the creation of MGH in 1811 followed by personal experiences that culminated with his leadership of the Radiation Oncology Department.

Predicting Species Occurrences J. Michael Scott 2002-02 Predictions about where different species are, where they are not, and how they move across a landscape or respond to human activities -- if timber is harvested, for instance, or stream flow altered -- are important aspects of the work of wildlife biologists, land managers, and the agencies and policymakers that govern natural resources. Despite the increased use and importance of model predictions, these predictions are seldom tested and have unknown levels of accuracy. Predicting Species Occurrences addresses those concerns, highlighting for managers and researchers the strengths and weaknesses of current approaches, as well as the magnitude of the research required to improve or test predictions of currently used models. The book is an outgrowth of an international symposium held in October 1999 that brought together scientists and researchers at the forefront of efforts to process information about species at different spatial and temporal scales. It is a comprehensive reference that offers an exhaustive treatment of the subject, with 65 chapters by leading experts from around the world that: review the history of the theory and practice of modeling and present a standard terminology examine temporal and spatial scales in terms of their influence on patterns and processes of species distribution offer detailed discussions of state-of-the-art modeling tools and descriptions of methods for assessing model accuracy discuss how to predict species presence and abundance present examples of how spatially explicit data on demographics can provide important information for managers An introductory chapter by Michael A. Huston examines the ecological context in which predictions of species occurrences are made, and a concluding chapter by John A. Wiens offers an insightful review and synthesis of the topics examined along with guidance for future directions and cautions regarding misuse of models. Other contributors include Michael P. Austin, Barry R. Noon, Alan H. Fielding, Michael Goodchild, Brian A. Maurer, John T. Rotenberry, Paul Angermeier, Pierre R. Vernier, and more than a hundred others. Predicting Species Occurrences offers important new information about many of the topics raised in the seminal volume *Wildlife 2000* (University of Wisconsin Press, 1986) and will be the standard reference on this subject for years to come. Its state-of-the-art assessment will play a key role in guiding the continued development and application of tools for making accurate predictions and is an indispensable volume for anyone engaged in species management or conservation.
